method

Page No: 1

2022-2026-CSE-B

Aim:

Write a program to swap two values by using call by address method.

At the time of execution, the program should print the message on the console as:

Exp. Name: Write a C program to Swap two values by using Call-by-Address

```
Enter two integer values :
```

For example, if the user gives the input as:

```
Enter two integer values : 12 13
```

then the program should **print** the result as:

```
Before swapping in main : a = 12 b = 13
After swapping in swap : *p = 13 *q = 12
After swapping in main : a = 13 b = 12
```

**Note:** Write the function **swap()** in Program1002a.c and do use the **printf()** function with a **newline** character  $(\n)$ .

## **Source Code:**

## Program1002.c

```
#include <stdio.h>
#include "Program1002a.c"

void main() {
   int a, b;
   printf("Enter two integer values : ");
   scanf("%d %d", &a, &b);
   printf("Before swapping in main : a = %d b = %d\n", a, b);
   swap(&a, &b);
   printf("After swapping in main : a = %d b = %d\n", a, b);
}
```

## Program1002a.c

```
void swap(int*p,int*q)
{
   int temp;
   temp=*p;
   *p=*q;
   *q= temp;
   printf("After swapping in swap : *p = %d *q = %d\n",*p,*q);
}
```

Execution Results - All test cases have succeeded!

```
User Output
Enter two integer values : 121 131
Before swapping in main : a = 121 b = 131
After swapping in swap : *p = 131 *q = 121
After swapping in main : a = 131 b = 121
```
